*Please test **all** products prior to installation to ensure proper function.

*Please note: Per the limited warranty, accurate installation of STL products requires the installer to have a good understanding of automotive electronics, procedures, and systems. STL products are of professional grade and professional installation is highly encouraged.

Instruction Manual:

1. Insert the cigarette lighter plug into the cigarette plug adaptor of your vehicle and power your unit on using the on/off with switch.
2. You may also cut off the cigarette lighter plug for a hardwired solution.
3. Once the cigarette lighter plug is removed you will have two power cables, one red (hot), and one black (ground), which you will take to your battery or other 12v power supply.
4. You will want to ensure your grounding cable is taken directly to the negative terminal of your battery to avoid any feedback which may disrupt your STL product.
